

This cost effective machine has PLC controls for manual packing, allowing precise, measured packing at high tempo.

METHOD

A mechanical auger, deposits pellets for weighing and packing in three tanks, each transfer tank holds about 30 kg pellets. The pellets are subsequently deposited into a scale.

When a pre-set weight of pellets is reached, a pneumatically driven sluice opens and transfer of pellets to the sack occurs.

The whole process is fast, efficient and effective.

TECHNICAL DATA

STATIV: Complete Length 600 mm, with 600 mm.

TOTAL HEIGHT: 2 300 mm
